# UK Sovereign Cloud: the secure foundation for your digital future

Protecting your most vital asset: your data.

CIVO

# Empowering the UK's Digital Future with the UK Sovereign Cloud by Civo

As global digital transformation accelerates, the importance of data sovereignty is becoming increasingly crucial for businesses worldwide. The UK Sovereign Cloud, powered by Civo, provides an unparalleled solution designed to ensure the sovereignty, security, and compliance of your data within the UK's jurisdiction. This dedicated infrastructure addresses the pressing challenges organisations face regarding data privacy, legal compliance, and security, helping to promote the UK's digital independence and economic growth.

**Why Choose Civo UK Sovereign Cloud?**

- **Data Sovereignty:** Guarantees that your data is stored, processed, and protected under strict UK laws, effectively navigating the legal complexities associated with international data laws such as the US CLOUD Act.
- **Enhanced Security:** Delivers robust, state-of-the-art security measures to safeguard your data from global threats and vulnerabilities.
- **Economic Benefits:** Supports the UK economy by keeping data within the country, which aids in job creation and strengthens the nation's digital infrastructure.

As the digital landscape continues to evolve, selecting a cloud provider that not only understands the intricacies of data sovereignty but also actively supports your organisation's growth and compliance needs becomes essential.

UK Sovereign Cloud by Civo is your trusted partner in navigating this complex environment, ensuring that your digital operations are secure, compliant, and future-ready.

*Civo is committed to providing a secure and compliant cloud environment that meets the highest standards of data sovereignty. Our Sovereign UK Cloud not only aligns with the stringent needs of regulated industries but also supports the UK's digital economy and infrastructure. Silicon Valley is not the answer to data sovereignty. We're ensuring that our customers' data is protected and exclusively stored and managed within the UK, giving them complete control and peace of mind.*

# What is a Sovereign Cloud?

In our globally connected digital era, where data breaches and compliance violations make headlines regularly, the need for stringent data management practices is paramount. A sovereign cloud provides a robust solution by ensuring that all data activities — from storage to processing and management — are governed strictly within the territorial, legal, and regulatory frameworks of a specific country.

## Core Principles of a Sovereign Cloud

### Data Sovereignty

Ensures comprehensive control over data by adhering to the laws and governance of the nation where it is physically stored. This principle extends beyond mere data residency, which only concerns data storage location, to include the jurisdiction under which data is processed and managed, offering a significantly higher level of protection and legal clarity.

### Legal and Regulatory Compliance

Sovereign clouds are architecturally designed to align with specific national regulations and legal requirements, crucial for sectors facing strict data governance standards such as healthcare, finance, and government services.
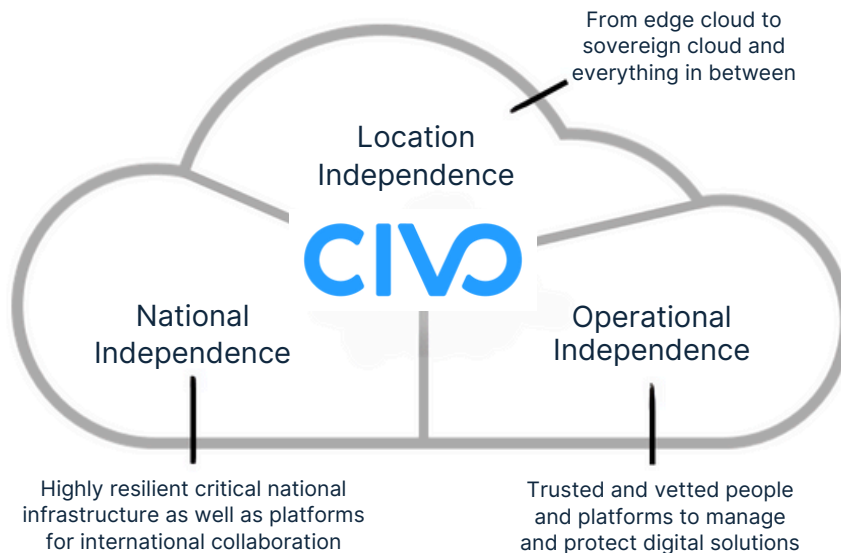

### Enhanced Security and Privacy

By localising data operations, sovereign clouds minimise the legal risks and security threats associated with international data handling, providing an environment where data is less vulnerable to foreign surveillance and cyber threats.

# What is a Sovereign Cloud?

**Defining Features of Sovereign Clouds**

From edge cloud to sovereign cloud and everything in between

Location Independence

CIVO

National Independence

Operational Independence

Highly resilient critical national infrastructure as well as platforms for international collaboration

Trusted and vetted people and platforms to manage and protect digital solutions

### Location Independence

Offers flexible data management across different cloud models while ensuring that all data remains within a specific legal jurisdiction — crucial for maintaining consistent compliance and data sovereignty across diverse operational scenarios.

### National Independence

Strengthens national resilience by hosting critical infrastructure within the country, thus supporting essential services and government functions without reliance on foreign technology and infrastructure.

### Operational Independence

Managed exclusively by personnel vetted and bound by the hosting nation's laws, which ensures that operational practices, data handling, and even the technology used conform to national standards.

# What is a Sovereign Cloud?

**Strategic Benefits of UK Sovereign Cloud by Civo**

The UK Sovereign Cloud by Civo is not merely a technical infrastructure but a strategic asset that enhances operational capabilities while ensuring compliance with UK law. It provides:

**Business Continuity and Data Integrity**
Ensures that business operations can continue smoothly without interruption from international disputes or compliance issues, preserving data integrity across all transactions.
**Support for the UK's Digital Economy**
By opting for a cloud solution that retains data within the UK, businesses contribute directly to the national economy, supporting local employment and fostering technological innovations that maintain the UK's competitive edge in the global market.

**Consumer Confidence and Trust**
In an age where data privacy concerns are paramount, using a sovereign cloud enhances consumer trust, knowing their data is handled within the stringent privacy frameworks of their own country.

## Why it matters?

Choosing the UK Sovereign Cloud goes beyond typical data storage solutions by providing a secure, compliant, and resilient environment for handling sensitive information. It's an essential tool for any organisation that prioritises data security, needs to meet strict compliance requirements, and values operational transparency and independence.

# Civo Sovereign Cloud Features

Civo UK Sovereign Cloud stands out with its robust feature set designed to meet the highest standards of security, compliance, and operational efficiency.

Each feature is tailored to ensure that businesses operating within the UK can leverage the power of cloud computing while maintaining complete control and sovereignty over their data.

Here are the key features that distinguish the Civo Sovereign Cloud:

### Meet the highest security standards
Civo Sovereign Cloud has rigorous security controls that are quick and easy to implement, keeping your data safe and secure in a trusted environment

### Compliance by default
Civo Sovereign Cloud is only ever subject to UK law. Civo Sovereign Cloud will help you navigate and stay compliant with complex regulations and industry requirements.

### Stay in control of your cloud
Civo Sovereign Cloud improves the visibility and audibility of your cloud activities. Your data never leaves the UK so you don't have to worry about where/who might be accessing it your data.

### Unlock the power of your data
Civo Sovereign Cloud allows you to easily share your data with other trusted organisations, all within the jurisdiction of the UK.

### Futureproof your business
Civo Sovereign Cloud removes the complexities of having to comply with multiple legal jurisdictions and reduces the risks of international threats and geopolitical impacts.

### Support the UK economy and fuel innovation
Civo Sovereign Cloud, a UK-based business, actively supports and enhances the UK's digital economy and security, contributing to the nation's sustainable digital future.
# Use Cases for UK Sovereign Cloud

The UK Sovereign Cloud provides a robust infrastructure designed to meet the diverse needs of various sectors by ensuring data security, enhancing operational efficiency, and maintaining strict compliance with UK laws. Below are examples of how different sectors can leverage the UK Sovereign Cloud to optimise their operations:

## Healthcare Sector

### Secure Patient Data Management

Healthcare providers can utilise the UK Sovereign Cloud to store sensitive patient records securely, ensuring that all data is protected under UK healthcare regulations and GDPR. This secure environment facilitates the safe exchange of patient information between authorised professionals and institutions, enhancing care coordination without compromising patient privacy.
### Research and Development

Hospitals and research institutions can use the cloud to manage large datasets for medical research while ensuring data is processed within compliance frameworks. This aids in developing new treatments and understanding disease patterns with robust data protection measures in place.

## Finance Sector

### Financial Data Security

Banks and financial institutions can host their transactional systems on the UK Sovereign Cloud to safeguard client data against cyber threats while ensuring compliance with the Financial Conduct Authority (FCA) regulations. The cloud's advanced security features prevent data breaches and ensure that financial data remains confidential and intact.

### Regulatory Compliance Reporting

The cloud facilitates compliance with complex regulatory requirements by providing tools that automate data gathering, processing, and report generation. This streamlines compliance processes, reduces errors, and saves time and resources in managing financial compliance.

# Use Cases for UK Sovereign Cloud

## Public Sector

### Government Data Services

Government agencies can use the UK Sovereign Cloud to manage public records and services securely. By hosting data domestically, it ensures that sensitive information related to national security, public welfare programs, and citizen services is not exposed to foreign jurisdictions or threats.

### Digital Transformation Initiatives

The cloud supports the public sector's digital transformation by providing a scalable platform for developing and deploying digital services that improve citizen engagement and operational efficiencies across various government departments.

## Education Sector

### Virtual Learning Environments

Educational institutions can leverage the cloud to host virtual learning platforms, ensuring robust performance and scalability during peak usage. Data sovereignty guarantees that student information and academic content are managed in compliance with local education standards and privacy laws.

### Research Collaboration

Universities can use the cloud to facilitate secure and efficient data sharing among researchers and academic partners, promoting collaboration without risking data sovereignty or integrity.

The UK Sovereign Cloud is equipped to support a wide range of use cases across various sectors, enhancing data security, ensuring compliance, and improving operational efficiencies. Its comprehensive security and compliance features make it an ideal choice for any organisation looking to modernise its IT infrastructure while adhering to the strict data sovereignty requirements of the UK.
